
O&O SafeErase 4 for Windows 7

Berlin, October 14, 2009 – Berlin-based Software manufacturer O&O Software GmbH has with O&O SafeErase 4 now released a further product compatible with Windows 7.

With O&O SafeErase 4, it is now even easier and quicker to delete private data beyond any chance of access. For the first time, O&O SafeErase comes with pre-defined deletion profiles, and lets the user delete browser data and temporary files safely and simply. This Minor Update is free for a great many O&O SafeErase owners.

O&O products already Windows 7 compatible

- **O&O Defrag 12** - packs file fragments back together to substantially increase system performance
- **O&O DiskImage 4** - Prevent loss of data through time-scheduled data imaging
- **O&O DriveLED 3** - monitors hard disks and warns of defects
- **Migration Kit for Windows 7** - an easy and quick way to change to Windows 7

More products to follow.

New and improved functions in O&O SafeErase 4 at a glance

Internet Security: With the new version of O&O SafeErase, it is now possible for the very first time to delete sensitive internet data too. The various internet browsers are automatically displayed, and the user just has to select which internet data he wishes to delete - for example Cookies.

Pre-defined deletion profile: O&O SafeErase has pre-defined deletion profiles, enabling the user to simply repeat oft-used deletion processes and thus increase efficiency. The program also saves the type of data which should be deleted, so that the user can simply select the process when starting up and the job will automatically be carried out.

Quick deletion: Writing over data with zeros means less sensitive data can be deleted at great speed. In addition, O&O SafeErase offers a further five methods of deletion, each one differing in the amount of procedures and the type of overwriting employed. Along with standard deletion procedures used by the U.S. Departments of Defense (DoD) and the German Bundesamts für Sicherheit in der Informationstechnik (BSI), the Gutmann Methods are also available, matching the highest security requirements and writing over data 35 times.

O&O TotalErase: With this function, a whole computer including its system partition can be securely deleted, without the need for Boot media. This process starts automatically after restarting the system.

Deletion of system drives: Individual system drives can be selected and securely deleted in offline mode.

Support of multi-core processors: Deletions are hugely speeded up here as the program takes advantage of the entire performance resources of the computer.

Detailed reports: It is particularly important for administrators that they have some kind of record of what data was deleted, and with which method. Reports can be made anonymous, to maintain data protection standards and to hide file names.

Prices and availability

The recommended retail price of O&O SafeErase 4 is EUR 29.90. An upgrade from a previous version costs EUR 19.90. Customers can buy O&O SafeErase at all major retailers, including Amazon.

Customers can also obtain O&O SafeErase 4 from an O&O Authorized Distributor or Reseller, details of which can be found at <http://www.oo-software.com/partner/en/distributor/>
