
O&O DiskRecovery 6: Sophisticated data rescue at the push of a button

Now available for Windows 7

Berlin, November 3, 2009 - Berlin-based software publisher O&O has now released a Windows 7 compatible version of its successful data recovery product O&O DiskRecovery 6. O&O DiskRecovery 6 looks for and reconstructs data that has been deleted either inadvertently or as a result of software error. O&O DiskRecovery 6 does this by searching for lost data through every sector of the hard disk or USB Stick with a fine tooth comb.

User-friendly: accidentally deleted files can be recovered directly from digital cameras, memory cards and USB Sticks. They must simply be supported by Windows as a drive.

New and improved functions

Various search algorithms: O&O DiskRecovery combines the powerful search processes of the hugely successful data recovery products O&O DiskRecovery, O&O UnErase as well as O&O FormatRecovery. The combination of these various processes produces the best possible chance of recovery. Files located using the technology from O&O UnErase are recovered with their various file information intact.

The search with O&O FormatRecovery can result in recovering files whose file information has been destroyed as a result of formatting or overwriting of the file directory.

The search algorithm from O&O DiskRecovery methodically scans through all areas of a hard disk, memory card, or USB Stick. There is even a chance to reconstruct data on file systems that have been formatted or destroyed. Once the product has finished its scan, it's possible to preview the data that can be recovered. The preview feature of O&O DiskRecovery 6 supports various picture and text formats, among them JPEG, BMP, TIF.

O&O DeepScan Option: O&O DeepScan makes it possible to locate even the smallest of files deleted from critical locations such as the Master File Table. Even such tiny files can now be recovered as O&O DeepScan deploys the maximum depth for scanning.

O&O RawScan Option: Should the deleted data be on a formatted data storage medium, by activating O&O RawScan the file system is ignored in the search, allowing even files on such media to be capable of rescue.

O&O SmartScan Option: O&O SmartScan solves the common problem during a data recovery that existing files are recovered as well as the deleted ones. O&O SmartScan has a filter that excludes existing files, significantly accelerating the scan and recovery process.

Filter function: Search results are presented in a clear overview, thanks to filters which sort by size or time (creation/last modified/last accessed). The filters can also blend out empty directories or files for refined search results.

Data image inclusion: Data images created by O&O DiskImage can now be included in recoveries for the very first time. To prevent a data loss through defective hardware, a forensic image can be created using the separately available O&O DiskImage. This comprehensive image also saves the (assumed) free disk space so that a full data recovery can be carried out later without touching the original hardware.

Differences between the various versions

The Personal Edition can recover up to 1000 files per session.

The Admin Edition can recover an unlimited number of files, and can be used by the licensee on an unlimited number of computers within a company or organization. The Admin Edition is ideal for all companies needing to recover data on their own computers while wishing to avoid the expense of one-seat licensing.

The Tech Edition can also recover an unlimited amount of files, and permits the use of O&O DiskRecovery 6 on all computers, even those not belonging to the purchasing company. The licensed technician is entitled to service any number of computers. The Tech Edition is ideal for all companies wishing to offer data recovery as a service to customers.

Price and availability

O&O DiskRecovery 6 Personal Edition is available for \$99.95 in the full version. The upgrade from a previous version as well as from a currently competing product costs \$59.95. O&O DiskRecovery 6 is available in our Online Shop and through our Authorized Resellers, which can be found at <http://www.oo-software.com/partner/en/reseller/>.
