
Data security network-wide: Simple administration with the O&O Enterprise Management Console 3

Berlin, February 9th, 2010 – Data security is a top-priority for every administrator these days, but until now it was also extremely time-consuming securing and backing up individual machines.

The O&O Enterprise Management Console 3 is the network management tool for O&O products. In combination with the newly-integrated O&O DiskImage 5, administrators can now make security images of drives and entire computers across their networks without having to leave their own desks.

The O&O Enterprise Management Console 3 also has the O&O products O&O Defrag 12 and O&O DiskStat 2 included, with more to follow.

The Console is based on the Microsoft SQL Server and can be integrated into an existing Microsoft SQL Database structure or into the Microsoft SQL Server Express which is included in delivery. Network management for smaller networks is therefore also fully supported.

The O&O Enterprise Management Console 3 will not only let administrators run jobs on individual computers and sites but also to perform remote installation of O&O programs. All events will be recorded in detailed reports and filed in the database so that users are kept informed about the successful running of jobs.

The optional SSL Encryption ensures that data cannot be read or manipulated during its transfer from the computer to the Service. O&O Enterprise Management Console is thereby able to provide administrators with the highest level of security and protect them from so-called "Man-in-the Middle" attacks, by which unauthorized parties gain access to communications across a network.

Integrated O&O products

O&O Defrag 12

Fragmented hard disks put the brakes on company PC's. O&O Defrag 12 optimizes hard disks and packs file fragments securely back together again. System files are sorted by O&O Defrag 12 according to their level of use, and each one will be separated into its own section of the hard disk. The Background defragmentation function prevents future fragmented files at source.

Together with the O&O Enterprise Management Console administrators can manage O&O Defrag from just one central location within the network. Not only can they run defragmentation jobs on individual computers and sites, but also install O&O Defrag remotely, saving the time and money involved in manual, individual defragmentation.

O&O DiskImage 5

With O&O DiskImage 5, images can be made of drives or entire computers quickly and simply. Combined with the O&O Enterprise Management Console, imaging can be

carried out across entire networks, installing, time-scheduling and imaging individual servers and workstations remotely from one central location.

O&O DiskStat 2

The new O&O DiskStat 2 Server Edition, working together with O&O Enterprise Management Console, analyzes the usage of hard disk space on servers and workstations across a whole network. With just a few clicks, administrators can detect the hard disks that are heavily occupied, and the data being saved on them, displayed clearly in tables or diagrams.

Maintenance Agreement

Under the O&O EasyLicensing program, a Maintenance Agreement provides free product upgrades and support requests for the time period concerned.

Prices and availability

The O&O Enterprise Management Console 3 costs US\$ 499.00 net including 1 year of Maintenance cover. The O&O Enterprise Management Console 3 is available exclusively from resellers. Resellers can obtain the Console from the O&O authorized distributors who can be found at <http://www.oo-software.com/partner/en/distributor/>

About O&O Software

O&O develops solutions for corporate customers that not only support them in their daily activities, but also help substantially reduce their costs. Our products for system optimization, data imaging, data recovery, secure data deletion and company-wide administration are pioneers in the Windows technology sector. Together with our worldwide network of partners, we support corporations, companies, public authorities and private customers in over 140 countries, all from our headquarters in Berlin, Germany.
