
Corporate Solutions - Solutions designed specifically for corporate clients

O&O provides a whole range of IT solutions for businesses

Berlin, May 23rd, 2012 - Corporate Solutions from O&O put a wide range of IT solutions under one roof, with the clear aim of making working with Windows desktops and servers across networks faster and safer. These solutions save businesses time, and more importantly money. Corporate Solutions takes the familiar software solutions from Berlin-based O&O Software and tailors them specifically for corporate customers and their service providers.

An overview of the various O&O Software solutions

Data Recovery

O&O DiskRecovery can quickly come to the rescue whenever a company suddenly loses data as a result of inadvertent deletion or a system crash. With help from its unique combination of three different scanning and recovery algorithms, O&O DiskRecovery tracks down any data that can be restored. A special feature of the O&O DiskRecovery Admin and Tech Editions is the option to create a bootable disk based on Windows PE. The boot medium contains O&O DiskRecovery and a range of O&O system rescue programs that provides access to the Windows registry or to stored files.

Disaster Recovery

If a system no longer starts then a data recovery with O&O BlueCon is the only chance. Only O&O BlueCon includes the original Windows subsystem (Windows PE), which provides secure access to data and system settings. As it is based on Windows PE O&O BlueCon enables deployment of a range of programs, e.g. system repairs, locating and fixing errors, recovery of lost data, reset passwords and much more. All integrated programs are run directly from the O&O BlueCon boot media (CD/DVD or USB stick). An installation or fully functional Windows are not required to use O&O BlueCon. With support for Hyper-V, O&O BlueCon can also be run in virtual environments.

Backup

No company these days is without a reliable data backup. O&O DiskImage is the solution when fast and exact backups of data or entire systems are needed. It is not only easy to use, but also provides a sophisticated scripting option for use in any network.

Security

Servers collect all internal information, such as customer data, accounting or sales figures. Regular backups, which contain information gathered over years, are also stored on servers. If individual hard drives or entire servers have to be replaced with newer hardware, the information contained on the old volumes quickly becomes a vast security risk. Protection is at hand in the form of O&O SafeErase: all data on old media

will be destroyed forever using scientifically recognized methods. Users choose from six deletion methods that differ in the number and type of deletion runs. Even if media has been formatted with Windows before disposal or return to the leasing company, data spies can still easily access and abuse the company data with commercial data recovery software. Not if O&O SafeErase has been deployed.

Performance

Performance increases of up to 100% due to optimized hard drives on servers and desktops - O&O Defrag can significantly increase the speed of computers. The performance of the existing hardware is utilized optimally, saving the cost of new hardware purchases and upgrades - an investment that pays for itself within just a few weeks.

Monitor Hard Drives

A server failure is now equivalent to a power failure for a company. Nothing works anymore. Downtime and loss of data have costly consequences. O&O DriveLED provides the ability to detect an impending failure in advance and to react: by backing up data and prevent data loss by replacing the problematic hard disk. This time to act proactively is usually with a sudden loss no longer available. In conjunction with O&O Enterprise Management Console the entire network can be monitored.

Monitor Disk Space

Huge amounts of disk space is wasted on unimportant files and folders. Not only does this slow down the computer, it also means that even more expensive storage space is not being optimally utilized, e.g. for a data backup. But the opposite can also occur: too much memory for too little data. These are all factors that increase IT costs unnecessarily and with the help of O&O DiskStat can be prevented or reduced. With help from O&O Enterprise Management Console, O&O DiskStat analyzes the disk space usage on servers and network computers. With just a few clicks, the administrator can locate those disks that are heavily occupied, and analyze what data are stored on them.

Network Management

The O&O Enterprise Management Console is the centralized management system for all O&O products. In addition to the distribution of tasks to individual computers and computer groups, the O&O Enterprise Management Console has remote installation and updating. Automatic notifications via e-mail in specific cases keep the administrator immediately informed. All events are recorded in detailed reports and stored in a database, allowing any information about the status of task executions to be retrieved at any time.

Support

Technical support during hectic running operations can be a huge time and cost saving. In addition to the free installation support, O&O Software offers various support models, from priority e-mail support to integrated product upgrade protection.

New Website

To do justice to this variety of products and the associated applications for business needs, the new website "Corporate Solutions" was created (<http://corp.oo-software.com/en/>). It presents the different software solutions clearly and in terms of

their usefulness in companies. In addition, the site contains specific pages dedicated to key topics, for example how much money a company can save simply by deploying O&O Defrag.

About O&O Software

O&O develops solutions for corporate customers that not only support them in their daily activities, but also help substantially reduce their costs. Our products for system optimization, data imaging, data recovery, secure data deletion and company-wide administration are pioneers in the Windows technology sector. Together with our worldwide network of partners, we support corporations, companies, public authorities and private customers in over 140 countries, all from our headquarters in Berlin, Germany.
