O&O DriveLED: Warns of potential hard disk crashes and monitors relevant system information

Berlin, May 27, 2014 – Berlin-based O&O Software is releasing the new version of O&O DriveLED today. O&O DriveLED analyzes hard disk information under Windows, warns of potential malfunctions, and can, among other things, help avoid unnecessary data loss resulting from system crashes.

O&O DriveLED now a component of the web app O&O Syspectr

This new version can also do a whole lot more. Thanks to its integration in O&O Syspectr, O&O DriveLed can now help users check whether important Windows security updates are installed on PCs and servers, if unauthorized software is being used, or if Windows security requirements are being met.

The user can have all vital system information displayed at any time: hardware, software, level of hard disk usage and health status, IP addresses – internal and external - and much, much more.

O&O Syspectr is a web app. Once it's installed on a computer, all that computer's data can be accessed using any current browser from anywhere in the world. Also running in the browser is a Remote Desktop that can be used for quickly resolving problems that may arise.

The user can access all system information even when the PC's not running. This allows for diagnosis when a computer is no longer working. O&O Syspectr can also be set to send email notifications for particular events so that immediate steps can then be taken.

As with all O&O products, O&O Syspectr is developed entirely by O&O Software at our Berlin location and provided over German data centers.

Pricing

Owners of the previous O&O DriveLED desktop version can use all the O&O Syspectr Premium features (worth 12€ or equivalent in local currency) for one year free of charge. After this period, O&O Syspectr can be used as a Free Version where O&O DriveLED is also available for unlimited use. O&O DriveLED is only available in conjunction with O&O Syspectr, a stand-alone version will not be offered.

The O&O Syspectr Free Version can be used on up to ten desktop PCs free of charge. A wider range of performance and features is available starting from 1€ monthly (or equivalent in local currency) per PC. A detailed overview can be found under: https://www.syspectr.com/en/pricing.

Modules

There are a number of modules already available. The list of modules and features is constantly being expanded.

- "Windows Security" for monitoring Windows Security settings and Anti-Virus programs that are installed

- "Windows Updates"
- "Software" displays the programs installed on the computer
- "Hard Disk Drives" lists the hard disks that are connected and indicates the corresponding amount of used space
- "USB Storage" for monitoring and blocking USB storage devices
- "O&O DriveLED" analyzes hard disk information, warns of potential malfunctions such as exceeding the critical running temperature or frequent read/write errors
- "Process Watcher" with white and blacklist for monitoring the status of processes and services
- "Remote Desktop" displays over a browser
- "Remote Console" opens a command prompt on a remote computer

System Requirements

O&O Syspectr can be used on any Windows system starting from XP and Windows 2003 Server as well as on virtual machines. O&O Syspectr requires nothing more than an internet connection: a DSL configuration or internet router is not necessary.

About O&O Software

O&O develops solutions for corporate customers that not only support them in their daily activities, but also help substantially reduce their costs. Our products for system optimization, data imaging, data recovery, secure data deletion and company-wide administration are pioneers in the Windows technology sector. Together with our worldwide network of partners, we support corporations, companies, public authorities and private customers in over 140 countries, all from our headquarters in Berlin, Germany.
