
O&O DiskStat released: Get back that lost disk space

With O&O DiskStat, O&O Software GmbH of Berlin, Germany presents its newest product in the "Solutions for Administrators" field. The ever-growing capacity of hard disks means more and more data is being downloaded from the internet and saved. Once the hard disk capacity is exhausted, so begins the laborious manual search for data that is no longer required. O&O DiskStat presents an immediate overview of those files and directories that are taking up the most space, and through a concise and user-friendly interface.

Berlin, May 15th, 2007 – Systems find their performance adversely affected by the amount of data stored and the burden this places upon them, so much so that a worthwhile backup is almost impossible. Notebooks in particular are built these days with hard disks of very limited capacity. Nevertheless, large amounts of data must be stored on them, forcing users to decide which data is required and which data can be disposed of.

O&O DiskStat is a high-performance tool for analyzing used disk space on storage volumes. Users can easily analyze their file and directory structures with the help of a Windows Explorer-like user interface. By way of an intuitive, graphic chart display, the user can easily identify those files or folders taking up the most space on their disk.

In addition, the "Top 10" view displays the largest files on a partition. This provides an immediate and concise overview of those files that are responsible for space wastage, thus enabling the user to save substantial time and disk space before making an essential backup of data.

The Server Edition of O&O DiskStat enables an analysis of network drives and sorting of files by ownership. Detailed reports can be created which provide the administrator with the chance to document, store and print comprehensive space usage information for both the server and the desktops.

The most important features at a glance:

- Quick analysis of the file system structure
- Intuitive and informative displays of file and directory structures
- Easy to use interface similar to Windows Explorer
- "Top 10" function for identifying the largest space wasters
- Sorting by file type, date last modified and by user in the server edition
- Comprehensive reports on disk usage can be exported and printed
- Analysis of network drives (server edition only)
- Supports numerous current Windows operating systems, including Windows Vista (32 and 64-Bit)

O&O DiskStat is available in two versions. The recommended retail price for O&O DiskStat Professional Edition for all desktop operating systems is EUR 29.90. O&O DiskStat Server Edition costs EUR 236.81 and runs under all current Windows operating systems (including server operating systems). The full version can be ordered over the

internet and is also available through retailers as a retail box which includes a printed User's Guide.

O&O Software offers licensing options for companies and special conditions for governmental and educational institutions through master agreements. Interested users can download a free 30 day trial version of the product from the O&O Software website. Operators can use the trial version to analyze their system partitions and test the vast array of impressive program functions.
