

O&O UnErase V4.1 for Windows Vista Released

With the new 4.1 version, O&O releases the hugely popular and award-winning data rescue product O&O UnErase with Windows Vista compatibility. It is now possible to recover deleted data at the push of a button under the new Microsoft operating system.

Berlin, 12 February, 2007 – Most data is deleted in error or through a virus attack these days. If no backup of such data has been made, important documents and irreplaceable digital photos can be lost forever.

The expensive Windows Vista Business Edition does offer the chance to create so-called Shadow Copies, but these do not provide reliable protection against irrevocable data deletion. The Vista Home Edition has no such option, meaning home users are delivered a copy of Windows that offers no protection against data loss, much like with their previous system.

O&O UnErase V4.1 remedies this. Users can recover their crucial data immediately. By way of a sophisticated Algorithm, more data can be recovered than ever before. With the O&O UnErase advanced search function, advanced settings can be created to refine and accelerate data searches. With the intuitive user interface, even inexperienced users can recover data quickly and easily. The file structure is presented in an Explorer-like display, enabling users to navigate through their deleted data as though it were still available. With one push of a button, single files or even entire directories can immediately be recovered.

To optimize the chances of a successful data recovery, O&O UnErase should be installed on the computer as a preventative measure. The quicker the data recovery is carried out, the less chance there is of new data being written to the hard disk or memory card, which can irreparably damage the data targeted for recovery. Even the search for data recovery software on the internet and the subsequent download can overwrite important data, and in the worst case prevent a successful recovery. That is why O&O UnErase should be installed on every computer in case of emergency, just like keeping a First Aid Kit handy!

New functions provide unique opportunities for optimizing searches. Whether you're searching for data on a hard disk, USB Stick or digital camera, O&O UnErase supports a whole range of storage media that are also recognized as drives by Windows. New to version 4 is the additional search for text within files, where for the first time the Unicode Format is supported.

The Important Features at a Glance:

- Recovery of files and directories within seconds
- Simple and intuitive user interface similar to Windows Explorer
- Refined search algorithm optimizes recovery success
- Text search in deleted files – also with unique support for Unicode files
- Advanced options enable precision searches for deleted files

- Supports all Windows file systems (FAT, FAT32, NTFS and NTFS5) on all hard disks, removable media (e.g. ZIP), disk drives, memory cards (e.g. USB Sticks) and almost all digital cameras
- Runs under all versions of Windows Vista, XP, 2003, 2000 and NT

O&O UnErase is available in three versions. The recommended retail price for O&O UnErase V4.1 Personal Edition for home users is USD 29.95 (Upgrade USD 19.95) and the Admin Edition for corporate customers USD 193.20. Companies offering data recovery as a service can buy the Tech Edition for USD 450.00. The full version can be ordered online and is also available through retailers as a Eurobox with a printed User's Guide.

Interested users can download a free 30 day trial version of the product from the O&O Software website. Operators can use the trial version to search for lost data and use the newly integrated functions. O&O Software offers licensing options for companies and special conditions for governmental and educational institutions through master agreements.
