

O&O DiskRecovery also rescues exotic picture files!

About Erlenbach Radiology

During the course of its medical activities, Erlenbach Radiology amasses a significant amount of stored picture files used for diagnostic and therapeutic purposes.

The Problem

Whilst updating a system partition on an important Windows PC, a digital picture archive saved on an external USB disk was accidentally formatted. It appeared as though the data was well and truly lost, and although several data recovery products of competing manufacturers were tried, they only managed to locate and recover a tiny amount of picture files.

The Solution

"Whilst searching for a solution in the internet we stumbled upon O&O DiskRecovery", explained an employee of Erlenbach Radiology. The User's Guide for the product, available on the O&O website, confirmed that O&O DiskRecovery should be more than capable of recovering the specific picture files required. In this case, it was special DICOM (Medical Imaging Data, .DCM) files that had to be found and rescued.

"We went ahead and purchased O&O DiskRecovery Admin Edition and were able to rescue every single picture file."

Around 100,000 files were rescued thanks to O&O DiskRecovery. The added option of being able to search for specific files and file formats greatly assisted in the recovery.

The Product

O&O DiskRecovery functionality begins where other programs leave off. This software combs every sector of a hard disk, memory card, or digital camera to find lost files. Even when files systems are formatted or destroyed, it is possible to reconstruct once deleted data.

Over 350 file types can be recognized and restored, including Word documents, Excel workbooks, Access databases, and virtually every sort of commonly used graphics, photo, movie, and music formats (JPEG, AVI, MPEG, MP3, WAV, BMP, TIFF, Corel Draw, Photoshop, Framemaker, Adobe Illustrator, and many more).

The new version offers advanced support of different file types, better support for user signatures and a preview function for a wide variety of file types. O&O DiskRecovery can help even when things look hopeless!
