## O&O DiskImage 10: Image files twice as fast - now also under Windows 10

Berlin, June 30th, 2015 - O&O Software, a specialist in data security and data recovery, introduces its latest version of O&O DiskImage. In order to ensure full integration into the new Microsoft operating system Windows 10, O&O DiskImage has been extensively revised. The new version 10 is compatible with all previous versions, so that images that are created with earlier versions, can still be used. It is possible to create images using O&O DiskImage of the complete Windows systems, individual drives, and files on the fly anytime. By restoring an image, the familiar working environment is available again within a very short time, regardless of whether it is restored on the computer on which the image was created or onto another computer with different hardware. For this purpose, O&O DiskImage 10 already has the machine independent restoration (MIR) function integrated.

### **New and enhanced functions**

**Plug-and-play functionality:** Selected files and folders are automatically backed up and synchronized. With the new O&O DiskImage 10, it is possible to run several tasks at the same time.

**Restoration onto different hardware (MIR):** With the integrated function M.I.R. (machine independent restoration) it is now possible to restore a system onto different hardware. Not only can an image or clone be restored onto servers and desktops with identical hardware, they can also be restored onto machines where, for example, the motherboard or processor has been changed. After the image has been restored, the new hardware can be adapted and the system can once again be started. Technology from the renowned O&O BlueCon Administrator Pack was deployed here.

**Optimized Memory Usage:** A maximum number of images can be specified and older images are automatically overwritten.

**Create a Windows Boot system:** With the current O&O DiskImage it is possible to create a boot medium on USB Stick or CD-R directly from within the program. This medium can then be used to restore an image onto a computer. O&O DiskImage 10 supports all current Windows versions from Windows Vista to Windows 7/8/8.1 and now Windows 10.

**Mounting data from ISO files:** Standard ISO files (ISO 9660) can be mounted as data image files and as virtual hard disks.

**One-Click imaging:** With just one click a user can start to image the entire computer. One-Click imaging is especially useful if O&O DiskImage is being used for the first time or where no computer image has been made.

**Various imaging methods:** For a complete image, users can choose between an image of used sectors and an all-inclusive forensic image for purposes of data recovery. An incremental or differential image will only backup those data areas that have changed since the last image operation, thus saving space.

**Scripting interface:** Full use and configuration of O&O DiskImage functionality can be achieved over an extensive scripting interface for integration into Batch files and a user's own applications.

**Supports EFI/UEFI Systems:** The new version supports current EFI/UEFI systems as well as the classic BIOS.

**Restoring individual files:** O&O DiskImage image files can be mounted as virtual disks. Individual files can then be accessed, for example using the Windows Explorer, and then subsequently restored.

**Virtual Hard Disks (VHD):** O&O DiskImage can convert images of virtual hard disks from Microsoft (VHD) into O&O DiskImage image files and vice versa. A virtual hard disk can therefore be directly restored.

**Visualization of data:** The graphical representation of the hard disks and drives – similar to the disk management in Microsoft Windows - allows for an intuitive selection of the volumes that are to be backed up or restored. Both free and used memory and the size of each partition are displayed, which makes managing the data easier. Data from ISO files: standard ISO files (ISO 9660) can be mounted as virtual hard disks as well as data image files.

#### **Prices and availability**

O&O DiskImage Professional 10 including machine independent restoration (MIR) costs \$49.95, and for use on up to 3 PCs O&O offers 3 licenses for \$69.95. All prices include 19% VAT where applicable.

O&O DiskImage 10 Server Edition, optimized for use within companies, will be released soon and will cost \$299.00.

Interested users can download a free 30-day trial version of O&O DiskImage 10 Professional Edition from the O&O website at <http://www.oo-software.com/oodiskimage/>.

Details about O&O Authorized Partners can be found at <http://www.oo-software.com/en/order/reseller/>.

#### **About O&O Software**

O&O develops solutions for corporate customers that not only support them in their daily activities, but also help substantially reduce their costs. Our products for system optimization, data imaging, data recovery, secure data deletion and company-wide administration are pioneers in the Windows technology sector. Together with our worldwide network of partners, we support corporations, companies, public authorities and private customers in over 140 countries, all from our headquarters in Berlin, Germany.
