

O&O AutoBackup 5 makes quick backups of private data even easier

O&O AutoBackup 5 backs up and synchronizes files and folders automatically so that whenever something goes wrong the old data can be accessed right away.

Berlin, August 25th, 2015 – O&O Software, a specialist in data security and data recovery, announces its latest version of O&O AutoBackup.

O&O AutoBackup automatically backs up and synchronizes selected files and folders using an external storage device, for example a USB drive, an NAS in a local network or a network drive. Whenever that device is connected to the PC, a backup process begins automatically. This is particularly useful for people with no IT knowledge - simply connect a device and the backup process starts.

The integrated real time synchronization feature protects data even faster. As soon as a file is changed or created on the source, O&O AutoBackup will copy it onto the connected target disk. For even better control over the data, O&O AutoBackup can synchronize the files automatically with several different storage devices: users can for instance save work documents to an external hard disk and put holiday photos on a USB drive. The user interface has been entirely re-developed using new technology.

The "Plug and Play" feature enables users to schedule several backup jobs to take place whenever the external device is connected. The file selection process has been optimized and enhanced. O&O AutoBackup 5 is also fully integrated into the new Windows 10 operating system from Microsoft.

The all-new simple and intuitive user interface requires just a few clicks for creating dependable backups and guarantees full protection. Data is copied to the target device as a 1-1 copy that can be accessed over Windows explorer in the usual way. No additional software is needed to restore the data.

Automatic file comparison

Whenever an external disk is connected to the computer, O&O AutoBackup will check to see if there have been any changes to those files and folders already located on that disk. There's no need to start the program manually.

Using a simple file selection dialog, the user can select the files, folders, and even partitions that he or she wants to backup.

Backup options include:

- Full Backup: all data is copied to the external disk into a directory. This is always the first step in order to have a complete backup of all selected files.
- Backup of the changes: All changes and new data will be copied. A new file is written each time but the original file on the external medium is not changed. Files that have been deleted on the source remain on the external disk.
- Synchronization: All changes are implemented and deleted data will be removed from the target medium.

- Real time synchronization: As soon as files are created or changed on the source, O&O AutoBackup copies them onto the designated target drive.

New and enhanced features

Automatic backup on multiple target devices: Multiple targets can now be selected for saving different data.

Engine and processes: Completely revamped for even faster synchronization.

Compatibility: O&O AutoBackup 5 is compatible with Windows 10 and fully meets the requirements of Windows Vista, Windows 7 and Windows 8.1.

Advanced settings: The user can specify to which folder the backup copy should be written, for example.

Scheduling: The user has various options available, among them, whether a backup should be carried out with new connections only, or on a daily/weekly basis.

Event viewer: Logs the various activities carried out by O&O AutoBackup.

Pricing and availability

O&O AutoBackup 5 costs \$29.95 for a single computer license and \$49.95 for a 3 Computer license package. Prices include 19% VAT where applicable.

Interested users can download a free 30-day trial version of O&O AutoBackup 5 from the O&O website: <http://www.oo-software.com/en/products/ooautobackup>. The free trial version gives users 30 days to convince themselves of all the great benefits O&O AutoBackup has to offer.
