

O&O SafeErase 10 Server: Delete digital data securely, now under Windows Server too

The new version 10 from O&O SafeErase is the solution for administrators to ensure they meet data protection standards by securely deleting files, partitions and entire hard disks.

Berlin, December 17, 2015 - O&O Software, specialist in data security and data recovery, announces the release of O&O SafeErase 10 Server and Workstation Editions that offer native support for the current Windows Server versions.

If data is deleted using the Windows delete function it can easily be recovered using specialist software within a matter of minutes. This creates a large risk of losing confidential data, especially as it is often impossible to know who will eventually get hold of machines when a company renews or disposes of desktop and server systems.

The enhanced analysis feature scans for deleted data that was not deleted securely and that could easily be restored by unauthorized parties, such as internet history and cookies. The computer or server can then be cleaned up with just a few clicks. SSDs are also recognized automatically and deletion processes optimized accordingly. The advanced management of reports and deletion lists for recurring jobs rounds off the O&O SafeErase experience.

The Workstation and Server Editions enable a parallel and secure deletion of all volumes simultaneously, saving lots of time. These editions are aimed at companies who wish to securely wipe confidential data from disks before passing the hardware on or disposing of it. Using professionally recognized methods, O&O SafeErase deletes sensitive data so securely that restoration is impossible, even when using specialized recovery software.

O&O SafeErase 10 is certified as Windows 10 compatible but it can also be used under all other Windows versions starting from Windows Vista. Microsoft Edge, the successor to Internet Explorer, is fully supported as are Internet Explorer, Google Chrome, Firefox and Opera.

New and improved features

Compatibility: O&O SafeErase is Windows 10 compatible and also explicitly meets the requirements of Windows Vista, Windows 7 and Windows 8. The Server Edition is compatible with all Windows Server versions from 2008 onwards.

Page-specific settings can be deleted (Edge): Permissions and settings can be configured for every individual website. Exceptions created as "DoNotTrack" along with the setting allowing full-page display will be deleted.

Page-specific settings can be deleted (Firefox): The permissions.sqlite and content-prefs.sqlite files save many permissions and settings that are assigned per website. These can include saved passwords or allowing pop-ups. O&O SafeErase can delete all of these files.

Instant Erase: Whenever data is deleted by right-clicking, a miniature dialog is displayed and secure deletion begins immediately.

Scripting integration: O&O SafeErase can integrate individual scripts for running deletions automatically over command lines.

Wiping an entire computer with O&O TotalErase: All files, settings, programs, and the operating system itself will be deleted so completely that restoration is impossible. Wiping the entire computer, including the start partition, can be done without the use of a bootable medium.

Six deletion methods: Overwriting data with zeros means less sensitive data can be deleted at great speed. In addition, O&O SafeErase offers a further five methods of deletion, each one differing in the amount of procedures and the type of overwriting employed. Along with standard deletion procedures used by the U.S. Departments of Defense (DoD) and the German Bundesamts für Sicherheit in der Informationstechnik (BSI), the Gutmann Methods are also available, matching the highest security requirements and overwriting data 35 times.

Browser security: O&O SafeErase lists per browser all the stored information - such as cookies, form data and Internet histories – which can be permanently deleted either individually or combined. Once deleted, there are no traces of Internet activity, and online accounts are protected from unauthorized access.

Detailed reports: O&O SafeErase provides detailed reports that indicate the files that were permanently destroyed and the method that was used for doing so. The reports can be made anonymous by, for example, hiding file names to protect privacy.

Pricing and availability

The recommended retail price of O&O SafeErase 10 Server Edition is \$199. The Workstation Edition costs \$39. The O&O SafeErase 10 Tech Edition costs \$990 and is suited to anyone who offers data deletion as a service. All prices include 19% VAT where applicable.
