O&O software

2022

The O&O Software GmbH

O&O Software GmbH was founded in Berlin in 1997. The company as it stands today is the result of the publication of the first defragmentation software from a European company in 1998, after having previously focused only on software projects for international corporations.

Over the past few years, O&O has become a synonym for „Tools for Windows" and is known for being one of the leading manufacturers of systems tools for the Windows operating system today with customers and partners in more than 140 countries. This translates into 76% of companies listed in the DAX and 43% of companies listed in the „Forbes 100 International" relaying on O&O products. Countless awards by the trade press confirm our commitment to our customers.

Our main objective lies in finding ways to let our customers concentrate on their core business instead of on the daily maintenance and administration of their IT systems. Our focus is on protecting data – from both unauthorized access and getting lost. With O&O Syspectr, we launched a free and very easy-to-use IT cloud management system for Windows back in 2013.

In doing so, we not only aimed to attract corporate customers, but also to provide private users with solutions that make life in the digital age much easier. Our release of O&O ShutUp10 introduced the world's leading product for protecting user privacy under Windows 10.

As a result of its outstanding achievements in software development for Windows. O&O Software GmbH was named a Gold Certified Partner by Microsoft in 2003, the highest award given to independent software vendors.

The group of companies

◎ O&O **group**

In addition to O&O Software GmbH, there are a number of other enterprises in our organization, all of them occupied with the development of software. They all partners belonging to the O&O Group GmbH and can draw on our large pool of expertise and personnel.

◎ O&O **services**

Founded in 2002, O&O Services GmbH has several decades of experience in the realization of IT projects. Under the motto "Delivering Value!", O&O Services generates added value for companies by creating advantages that strengthen our customers' competitiveness. O&O Services specializes in the development of web applications, particularly those with complex cloud infrastructure. Along with introducing tailor-made business applications, the company provides full service for their maintenance and further development. All our services are provided professionally and with the highest level of commitment.
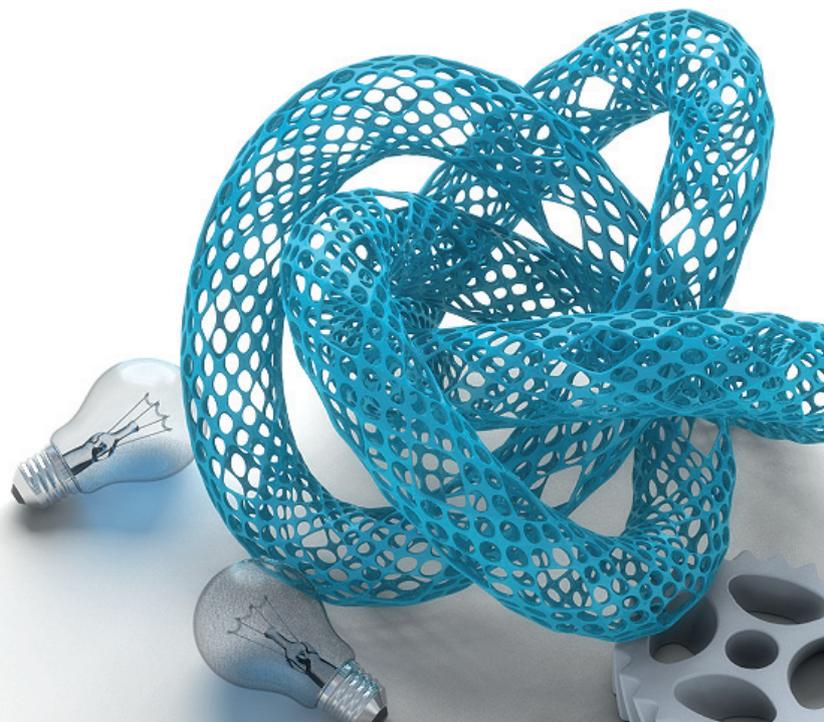

◎ O&O **exono**

Since starting exono GmbH in 2006, we've also been providing other software publishers access to our worldwide network, bringing their solutions to relevant markets quickly and economically. exono sees itself as both a door opener and a full service provider; we manage everything from issuing the license to the placement of packs in retail markets.

Research

We have been developing and researching at our location in Berlin, Germany for over 20 years. Whereas Windows NT 4 was still our basis in 1997, current platforms such as Windows and Linux on local PC systems, tablets, and smartphones as well as in the cloud have become our daily bread.

In recent years, we've been increasingly focused on developing cloud applications for IT management and data backup in the cloud. Such efforts resulted in the first O&O Syspectr that appeared in 2012 and that we later released in May 2013.

In 2016 came the initial version of CloudCuber, the only solution of its kind worldwide that distributes data backups to a geographically dispersed cloud while also protecting against system failure at minimal labor and cost.

We are currently participating in research projects within the framework of the fast initiative, which is funded and supported by the German Federal Ministry of Education and Research. Our research focuses on Edge Cloud and Mobile Edge Cloud to facilitate data access with improved privacy protection for both users and applications in industrial environments.
